

TEST PLUG CONNECTIONS

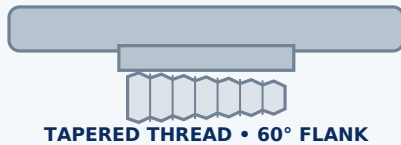

NPT • BSPT • BSPP THREAD OPTIONS

Texas Test Plugs offers three connection styles for P/T plugs. Choose the thread form that matches your system and regional piping standard.

NPT CONNECTIONS

National Pipe Thread • tapered

STANDARD • STOCKED

NPT (National Pipe Thread) is the most widely used pipe-thread connection in pressure calibration systems in the U.S. and Canada. It is the standard connection on all Texas Test Plugs P/T plugs.

Available from stock for fast shipment.

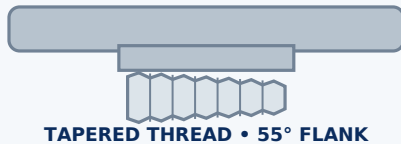

Standard sizes: 1/8" NPT, 1/4" NPT and 1/2" NPT

Available materials: Brass, lead-free brass, 303 stainless steel and 304 stainless steel

BSPT CONNECTIONS

British Standard Pipe Taper

CUSTOM ORDER

BSPT is similar to NPT, but the thread forms are not interchangeable. Its thread flank angle is 55 degrees, compared with 60 degrees for NPT.

Availability: Non-standard, non-inventoried connection

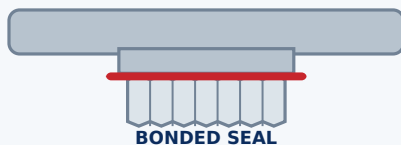

Typical lead time: 8 weeks | Minimum: 2,500 pieces

Pricing is quoted for each requirement.

BSPP CONNECTIONS

British Standard Parallel Pipe

CUSTOM ORDER

BSPP is a parallel-thread connection widely used in the UK, Europe and Asia. Because the threads do not taper, sealing is provided by a bonded sealing washer, not by interference between the threads.

Availability: Non-standard, non-inventoried connection

Typical lead time: 8 weeks | Minimum: 2,500 pieces

Pricing is quoted for each requirement.

NEED HELP SELECTING A CONNECTION?

Send us your thread specification, material and quantity. We will confirm compatibility and quote your requirement.
